

Introduction to Prompting frameworks

Exercise 1 – RTICFA

In this exercise, I used the RTICFA framework. I defined the AI's role, assigned the task of writing a blog introduction, provided product information, added the usage context, specified the output format, and identified the target audience. This structure helps the AI generate a beginner-friendly and engaging blog introduction.

Exercise 2 – ERA

Here, I applied the ERA framework. I first defined the expected outcome, then assigned the AI the role of a professional email writer, and finally specified the action of writing a follow-up email after a client meeting. This ensures a clear and professional response.

Exercise 3 – APEX

In this exercise, I used the APEX framework. I defined the action of writing an Instagram post, explained the purpose of attracting local customers, and set expectations such as a friendly tone, appropriate length, emoji usage, and a call-to-action.

Exercise 4 – TASK

Here, I used the TASK framework. I clearly defined the task, described the action of responding and apologizing to the customer, and added context about the delayed delivery and customer frustration. This helps create a polite and solution-oriented response.

Exercise 5 – CARE

In this exercise, I applied the CARE framework. I provided workplace context, defined the required action, specified the expected result, and requested an example explanation. This makes the leave policy easier for new employees to understand.

Exercise 6 – RISE

Here, I used the RISE framework. I assigned the AI the role of a trainer, provided the topic as input, requested a step-by-step explanation, and asked for a real-world example. This makes technical concepts like APIs easier for non-technical users.

Exercise 7 – CASE

In this exercise, I used the CASE framework. I explained the hiring context, requested HR interview questions, defined the scenario as an entry-level position, and asked for sample questions. This generates interview questions suitable for fresh graduates.

Exercise 8 – ACRE

Finally, I used the ACRE framework. I identified the audience as company employees, explained the holiday announcement context, made a clear request to create the announcement, and asked for a sample. The result is a professional and easy-to-read internal announcement.
